Collection

El cemento es un conglomerante formado a partir de una mezcla de caliza y arcilla calcinadas y posteriormente molidas, que tiene la propiedad de endurecerse después de ponerse en contacto con el agua. Desde la antigüedad se emplearon pastas y morteros elaborados con arcilla o greda, yeso y cal para unir mampuestos en las edificaciones. El cemento se empezó a utilizar en la Antigua Grecia utilizando tobas volcánicas extraídas de la isla de Santorini, los primeros cementos naturales.

En el siglo I a.C. se empezó a utilizar en la Antigua Roma, un cemento natural que ha resistido la inmersión en agua marina por milenios, mientras que los cementos Portland no duran más de 60 años en esas condiciones; formaban parte de su composición cenizas volcánicas obtenidas en Pozzuoli, cerca del Vesuvio. La bóveda del Panteón es un ejemplo de ello.

Cement is a binder formed from a mixture of calcined and subsequently ground limestone and clay, which has the property of hardening after coming into contact with water. Since ancient times, pastes and mortars made with clay, plaster and lime have been used to join masonry in buildings. Cement began to be used in Ancient Greece using volcanic tuffs extracted from the island of Santorini, the first natural cements.

In the first century B.C. in Ancient Rome, a natural cement began to be used, which has resisted immersion in seawater for millennia, while Portland cements do not last more than 60 years in these conditions; Volcanic ash obtained in Pozzuoli, near Vesuvius, was part of its composition. The vault of the Pantheon is an example of this.
